Kin

Save together.
Get paid in turn.

The savings circle people already trust, on Solana Mobile.
Bonded, verifiable, and nobody holds the money.

Live on devnet CLOCK IN · Solana Mobile Hackathon · github.com/angelraph/kin

01 · THE PROBLEM

Millions already save in circles. The money lives in a notebook. The trust lives in a group chat.

Ajo, susu, tanda, chama, committee: everyone pays the same amount each round, and one member takes the whole pot until everyone has had a turn.

Someone stops paying

The next person's pot comes up short, and the circle falls apart.

Someone forgets

Saving happens once a month, not every day. People simply miss the date.

Nobody can prove it

Who paid, who goes first, who is owed: it all rests on one person's word.

02 · HOW KIN WORKS

The same circle, with the rules written into Solana.

1

Start or join

Pick a ready-made circle or set your own. Friends join with a link.

2

Lock a bond

A small deposit that pays your share if you miss, and comes back at the end.

3

Pay each round

One tap, or switch on autopay and stop thinking about it.

4

Take your turn

When everyone has paid, the pot goes to that round's member.

Money sits in program-owned vaults. No instruction lets anyone take it, and no server can move it.

03 · WHAT KEEPS THE MONEY SAFE

Each way a circle breaks has a fix in the program.

When…	Kin…
someone misses a payment	pays their share from their bond, so the pot still goes out on time
someone forgets	collects through autopay: a capped allowance they can revoke any time
people argue who goes first	draws the order from on-chain data; anyone can recompute it
a stranger looks risky	shows their Kin Score, a payment record that follows the wallet
fake accounts try to join	can require a Seeker Genesis Token, checked by the program itself

04 · BUILT FOR THE PHONE

Native Android, built for Seeker. Not a website in a wrapper.

Mobile Wallet Adapter

Every action is signed in the wallet. Kin never holds a key.

Reminders

A read-only watcher checks the chain every 15 minutes and notifies when something is due.

Home-screen widget

Shows the circle that needs attention most, without opening the app.

.skr and .sol names

Shows a member's Seeker name instead of a raw address.

Invite links

Share a circle to any chat app. It opens straight into Kin.

Try with no wallet

A full circle plays out locally, then one tap gets devnet test funds.

05 · PROOF

Don't take our word for it.

In the app: Check on-chain

[x] vaults hold what members are owed
[x] payout order recomputed from the seed
[x] no instruction lets anyone take funds
[x] every payment links to the explorer

27 on-chain tests on a local validator, plus app tests checked against an independent JavaScript client.

Verified build: solana-verify reproduces the exact bytes deployed on devnet.

Open about limits: on devnet the developer holds the upgrade key. Before mainnet it moves to a multisig with a time delay.

Program 7CGtKBZVMKgWJRg92SmRiQkeQe8hvTV3SWrHRfsdSMWe · devnet

06 · SKR

A circle can save in SKR.

Contributions and bonds are just an SPL token, so a whole circle can run in SKR, from the create screen through to the proof. On devnet it runs in tSKR from Kin's faucet.

SKR club template

One tap sets up a circle priced in SKR.

Seeker-only circles

Gate a circle on a Seeker Genesis Token.

.skr identity

Members see each other's Seeker names.

07 · WHY PEOPLE COME BACK

A circle brings every member back, every single round.

Built-in rhythm

Pay, collect, get paid. A five-person monthly circle is five months of return visits.

Growth through friends

Every circle needs members, so every new circle sends invites to people who aren't on Kin yet.

A score worth keeping

Your Kin Score follows your wallet. A good one gets you into the next circle.

For Seeker owners: a daily-useful app with real money habits, not a one-time airdrop visit.

08 · ROADMAP

From devnet to a credential.

NOW · LIVE ON DEVNET

Bonded circles
Capped autopay
Verifiable payout order
On-chain Kin Score
Seeker Genesis gate
Proof screen, reminders, widget

NEXT · MAINNET

Independent security review
Upgrade key to a timelocked multisig
Real USDC, small caps per pot
Bonds and fees in SKR
Solana dApp Store listing
Invite links before install

LATER · SCORE AS CREDENTIAL

SDK so other apps read a Kin Score
Lending and rent deposits on a good score
Shared goals and group treasuries
Local-currency circles via on/off ramps

Kin

Try it in two minutes.

1 · Install the APK on any Android phone or Seeker

2 · Watch a circle play out, no wallet needed

3 · Connect a devnet wallet and tap Get test funds
